1. Road Tour

   a) Isthmus Bay Road

   Council's first stopped in the area of 239 Isthmus Bay Road. The Public Works Manager advised that the Request for Proposal to undertake the Class Environmental Assessment process closes next week. Discussion took place with respect to the EA process and its potential outcomes. It was noted that Council may have to consider an option to design the road to accommodate a Municipal water main(s). Council was advised that, although the Public Works Department has sectioned Isthmus Bay Road into three (3) distinct areas, the EA will encompass the road in its entirety. Council was reminded that there is a heavy pedestrian presence on Isthmus Bay Road and that the local residents are asking the Municipality to provide a walkway to accommodate the needs of those pedestrians.

   The tour then proceeded south on Isthmus Bay Road and stopped in the vicinity of #165. The Public Works Manager advised that this area does encounter water ponding at times noting that curbing may be required here. He spoke to the location of the actual road allowance versus where the road presently lies on the land. He reminded that the EA will offer solutions to all applicable problems. It was noted that traffic counts for Isthmus Bay Road are available from the County of Bruce.
